Introduction to Data Science Course 2.0 with AI

The world of data has changed. Traditional data skills are no longer enough. This is the complete course overhaul designed to equip you with the advanced, job-ready expertise in AI, Deep Learning, and MLOps that define the next decade of tech.

"We built the Data Science 2.0 course because our commitment isn't just to teach you current skills—it's to ensure your career is future-proof. AI is now the core of every business. This new curriculum is radically focused on deployment, automation, and real-world AI applications, guaranteeing you step into the job market as an AI Specialist, ready to drive real impact from day one. Your journey to leading the data revolution starts here."

- Debajyoti Sharma, CEO, OdinSchool

Data Science Course

Detailed Curriculum

Statistics

- Introduction to data and data types
- Important functions with stats fundamentals
- Skewness, Kurtosis, Normal Distribution
- Correlation analysis

Advance Excel

- Interface, Data Entry, Formatting
- Basic Formulas
- Cell Referencing
- Sorting, Filtering
- Logical & Text Functions
- Lookup Functions
- Conditional Formatting
- Data Validation
- PivotTables
- PivotCharts

SQL

- Fundamentals of relational databases and structured querying
- Data retrieval using logical and conditional filters
- Data modeling with keys and relationships
- Introduction to join operations for combined analysis
- Applying joins for multi-table analytics
- Query optimization for efficient data exploration
- Aggregate computations with grouping and conditional analysis

SQL Project

Power BI

- Introduction to Power BI
- What is Power BI Architecture, license and PowerBI Desktop intro
- Connecting Power BI With Different Data Sources
- Introduction to Power Query & Data Transformation
- Data Preparation with Power Query
- Difference between Transform & Load
- Merge & Append Queries
- Transform Table Tools
- Text Column Tools
- Date Time Tools
- Conditional Column, C
- Data Modelling
- Introduction to Dax
- Calculate Columns and Measures
- Dim Date Table
- Power BI Visualization ,Building Power BI Report using Visuals
- Filter Pane
- Drill Down, Drill Through, Map Visuals, Visual tooltips, Tooltip Page

Capstone Project

Python

- Python fundamentals and analytical scripting
- Data handling through structured programming
- Control logic for process automation
- Iterative data processing using optimized loops

EDA in Python

- Numerical analysis using Python arrays
- Structured data operations for computation efficiency
- Exploratory data analysis using data frames
- Data transformation and cleansing for insights

Machine Learning

- Machine learning concepts and workflow fundamentals
- Regression analysis and predictive modeling
- Model evaluation through performance metrics
- Interpreting analytical outcomes for decision support

Generative AI

- GenAI Landscape
- Limits
- Misconceptions + risks (hallucination, bias)
- Prompt Engineering
- Intro to Customization
- Retrieval-Augmented Generation (RAG)
- Multimodal AI
- Ethics & Responsible AI
- Automating Workflows (n8n, Zapier)
- AI tools for Analytics

Tools

Power BI

Co-Pilot

Power BI DAX

MySQL

NumPy

Pandas

Matplotlib

Seaborn

Plotly

n8n

Python

Scikit-learn

Bonus Modules

Deep Learning

- NLP
- Text Preprocessing
- Bag of Words
- TF-IDF
- Word Embeddings (intro)
- ANN – Basics
- Neuron Model
- Activation Functions
- Neural Network Architecture (Input, Hidden, Output layers)
- Forward Propagation
- Backpropagation
- CNN
- Convolution Operation (filters & kernels)
- Padding
- Stride
- Pooling Layers (Max & Average)
- RNN
- Recurrent Connections
- LSTM
- GRU

Tableau

- Creating and Working with Different Chart Types
- Data Visualizations with Filters, Hierarchies, and Drilldowns
- Creating Dashboards and Stories
- Advanced Functions: Parameters, Forecasting, and Relationships

Azure

- Basics of Cloud Computing and Azure Introduction to Azure
- SQL Database and Data Factory
- Working with Azure Databricks for big data processing
- Integration with Delta Lake and Azure Synapse Analytics

Career Acceleration Skills

OdinSchool's Personality Development Sessions will unlock your full potential and carve out a rewarding career path. Elevate your skills, boost your confidence, and thrive in today's competitive professional landscape. Your journey to success begins here.

Communication Skills

Effective communication is the bedrock of success in any profession. These sessions offer a comprehensive curriculum to sharpen your communication skills, ensuring you can convey your thoughts and ideas with confidence and clarity.

Learning How to Learn

Under the much needed awareness of learning in today's world, we delve into the art of effective learning. Discover the science behind efficient study techniques, information retention, and continuous skill acquisition. Gain the edge in your career by mastering the skill of learning itself.

Confidence Doubler

Confidence is the cornerstone of success. Our confidence-building session explores practical strategies to boost self-assurance, enhance your communication skills, and project a strong, professional image in any situation.

Emotional Intelligence Mastery

Emotional intelligence is a key driver of effective leadership and teamwork. Explore the depths of self-awareness, empathy, and interpersonal skills in this session, enabling you to navigate professional relationships with finesse.

Turn Clockwise - A Time Management Adventure

Time is a precious resource, and mastering its management is vital. Our time management session equips you with strategies to prioritize tasks, set achievable goals, and maintain a healthy work-life balance.

Problem Solving aka Design Thinking

Innovation is at the heart of success. Develop problem-solving prowess and foster creativity through design thinking methodologies. Learn how to tackle challenges with a systematic and innovative approach.

Course Highlights

COHORT-BASED LEARNING

We believe that learning as a group is greater than the sum of individual learning. Collaborate, discuss and deepen your learning in cohorts.

INDUSTRY-VETTED CURRICULUM

We develop the curriculum in consultation with several industry experts so that the course is highly up-to-date and in-line with the current job requirements.

PROJECT-BASED APPROACH

Practice during live sessions by attempting tasks that are aligned to the topics covered. This is to ensure that every student understands the concepts and also learns to implement it right.

LIVE CLASSES

Interact with your instructors in real-time every weekend. Learn new subjects and clarify your doubts through interactive methodologies.

INTERACTIONS WITH INDUSTRY EXPERTS

Attend OdinTalks to learn beyond the curriculum. Analyse real-time cases and learn Data Science.

FORMATIVE & SUMMATIVE ASSESSMENTS

Test your skills and assess your learning through regular assessments. Interact with the instructors one-to-one and get personalized feedback.

DEDICATED STUDENT SUPPORT

Have a doubt about the subjects? Need support? Contact the dedicated student support team and get your doubts clarified at the earliest.

WORKSHOPS ON WORKPLACE SKILLS

Companies also look at your behavioral traits and cultural fit into their work cultures. Learn and hone your behavioral skills to enhance your employability quotient and excel in your careers.

MENTORSHIP

Understand how Data Science looks like in the real world and prepare yourself to meet the challenges. Mentors help you hone your skills and become more aligned with the industry.

MOCK INTERVIEWS

Attend mock interviews with experts to get a grip on those pre-interview nerves. Test and practice your skills in these sessions.

Course Outcomes

Data Science Course prepares you for various Data Science roles such as Data Engineer, Data Analyst, Data Visualizer, Business Analyst, Machine Learning Engineer

Develop expertise in SQL fundamentals and advanced querying techniques (Joins, Subqueries, Window Functions, and CTEs).

Gain strong foundational skills in Python programming, data manipulation using Pandas, numerical computations with NumPy, and visualization using Matplotlib and Seaborn.

Learn Supervised and Unsupervised Learning models, model evaluation (Cross-Validation, ROC-AUC), and hyperparameter tuning with real-world applications using tools like Streamlit.

Engage in hands-on projects integrating SQL, Python, and Machine Learning techniques to address practical problems along with the usage of AI

Earn Dual Certification- Diploma from Recognised University and Course completion from OdinSchool

Preeti Kunwar

Fresher, Placed at Symphony Retail AI

"Working at Symphony Retail AI in the data analytics team is a great experience. Not only am I learning the ropes of Data Analytics, but I also have the opportunity to work with several dedicated individuals in my chosen field of work. I am beyond happy with my first Data Science role in the industry. This would not have been possible if not for the amazing learning experience at OdinSchool."

Projects

Reinforce your learning with 10+ Capstone projects.

• Credit Card Approval

A bank's credit card department is one of the top adopters of data science. A top focus for the bank has always been acquiring new credit card customers. Giving out credit cards without doing proper research or evaluating applicants' creditworthiness is quite risky. The credit card department has been using a data-driven system for credit assessment called Credit Scoring for many years, and the model is known as an application scorecard. A credit card application's cutoff value is determined using the application scorecard, which also aids in estimating the applicant's level of risk. This decision is made based on strategic priority at a given time. Data cleaning and manipulation are also major challenges. This project requires extensive use of feature engineering and exploratory data analysis. It is important to perform multiple machine learning models to successfully complete and defend your project.

• COVID 19 Prediction

A speedy and accurate diagnosis of COVID-19 is made possible by effective SARS-CoV-2 screening, which can also lessen the burden on healthcare systems. There are prediction models that assess the likelihood of infection by combining a number of parameters. These are meant to help medical professionals all over the world treat patients, especially in light of the scarcity of healthcare resources. The dataset adds a real life challenge and addresses similar problems in future. In this project you are required to identify important symptoms ensuring COVID results without any lab test. Data cleaning and manipulation are pivotal to successfully complete this project. COVID-19 project requires extensive use of feature engineering and EDA. Using multiple machine learning models, perform cross validation and use ROC curve to identify the best model.

• Predicting Health Insurance

The majority of the countries finalize health insurance costs based on many factors such as age, the number of people in families, etc. What should be the actual health insurance price for an individual or a family is an issue for many companies. This current project allows you to identify important features that may affect someone's health insurance, exploring data extensively and identifying patterns in the data. Use multiple machine learning models with cross validation and hyperparameter tuning.

• Predicting House Price

During your life, at least once, you would want to buy a house. It may be a villa or a flat. The most important factor is the house price which can affect your decision to buy it or not. But how would you know that the asked price is the correct price or if your builder is demanding too much? House price also depends on many other factors such as area, number of bedrooms, furnishins, number of bathrooms, etc. In short, house price prediction is becoming a new market. This project judges your statistics, EDA, feature engineering and machine learning skills.

Additionally, improve your model by performing validation and hyperparameter tuning.

• Bank Term Deposit

Banks and financial institutions can make money through financing. For example, they likely earn a profit by issuing home, car, and personal loans and charging interest on those financial products. Thus, banks are often in need of capital to fund the loans. Term deposits can provide locked-in capital for lending institutions. Banks want to maximize their net interest margin (net return) by offering lower interest for term deposits and charging high interest rates for loans. The project utilized an extensive use of statistics, EDA, feature engineering and machine learning using python..

• Analyzing and Predicting California Housing Prices

This project focuses on analyzing and predicting housing prices in California using a dataset that includes various features such as location, housing size, number of rooms, population density, median income, and proximity to amenities. Key highlights of this project utilizes extensive fundamentals of python and its libraries..

• German Credit Risk Assessment

This project focuses on developing a predictive model using the German Credit dataset to assess credit risk for individuals in Germany. The dataset contains various features such as age, employment status, income, credit history, and loan purpose. In this project you will perform multiple statistical tests, extensive exploratory data analysis using plotly library.

• Predicting Customer Churn Rate

For businesses, predicting customer churn rate is crucial since it allows them to identify the reasons why customers leave and take proactive steps to keep them. Data collection, data preparation, data analysis, visualization, and predictive modeling are a few stages to concentrate on when forecasting customer churn rate. We Perform these steps using different analytical tools. Furthermore, We monitor customer churn rate and take proactive measures to retain the customers.

Niraj Gupta

Technical Recruiter, Human Resource, Cotiviti

"My appreciations to the team at OdinSchool for the time and effort put to provide the right candidates for roles in our company, hence assuring quick TAT. The team was prompt in responding with the course curriculum and other details requested. I thank the team for continuous assistance and follow up throughout the process. I wish to have a fruitful association going forward as well. Thanks again!!"
